## FUSION SPLICERS FOR OPTICAL FIBER

Optical fiber plays a critical role in today's communication networks – from telecommunications to CATV to data. Furukawa is a major manufacturer and provider of high quality optical fiber and fiber optic products. This includes a complete line of fusion splicers that produce highly accurate, reliable splices with minimal loss. Furukawa's fusion splicers are designed using state-of-the-art technology, decades of manufacturing experience and feedback from countless customer installations. You'll find that FITEL splicers are simple yet precise and reliable tools that can support your full range of fiber manufacturing, R & D, installation, and maintenance applications.

**S123C / S123M4 /  
S123M8 / S123M12**

...page 5-7

With its low profile and IP-52 rated super rugged body, the FITEL S123 series fusion splicer offers speedy operation at every splicing field, FTTx, LAN, backbone or long-haul installations.

Large battery capacity makes it possible to perform 70 cycles on S123C and S123M4 with single battery and 100 cycles on S123M8 and S123M12 with two batteries.

Combining the portability, power flexibility and field ruggedness, S123 delivers the fast and consistent splicing with outstanding mobility and extreme ease-of-use.

**S153A**  
...page 8-10

The Fitel S153A using "Active V-Groove alignment" is the first choice for low cost field splicing equipment.

The Active V-Groove technology used on the S153A delivers low loss splices with ease while eliminating common Fixed V-Groove splicing errors.

Using the same rugged metal body as also-new FITEL S178, the S153A is designed to endure harsh operating conditions by improving shock / impact resistance with rubber pads embedded on 4 corners of the splicer body. It also achieves water resistance compliant to IPX2 and dust resistance compliant to IP5X.

## S178A

...page 11-13

The FITEL S178A Hand-Held Core-Alignment Fusion Splicer is the latest, state-of-the-art addition to the S17x series of splicers. By combining speed, precision, durability and portability in one unit, the S178A Fusion Splicer brings an entirely new range of applications for core alignment splicing.

The S178A is equipped with a new alignment system that can reduce the splicing time by up to 20%. In addition, the improved heating mechanism also reduces the protection sleeve shrink time by more than 30% and the newly incorporated USB 2.0 interface speeds up PC communication and image / video transfer, whilst enhancing reliability.

## S183PMII / S184PM-SLDF

...page 14-17

The S18x Full Function Splicer series provides you the ultimate splicing solution. Designed primarily to address production and research splicing needs in the optical components industry, this is the most advanced series, along with S184PM-SLDF, in FITEL's extensive line of high performance machines.

## OPTICAL FIBER SPLICING PROCESS

### STRIPPING

22 - 23

Using a fiber stripper to remove the coating material from the fiber.

### CLEANING

24

Using alcohol and a specially designed wiper to clean the bare fiber.

### CLEAVING

21

Using a precise cleaver to cut the fiber.

### SPLICING

4 - 17

Using a fusion splicer to align fibers & discharge the arc to connect the fibers. In addition, the unit will inspect the quality of the splice after the process.

### PROTECTION

26

Using a heat-shrinking sleeve to protect spliced fiber.

# Types of Fusion Splicers in the industry

There are a number of ways to categorize splicers. Here we categorize them based on the fiber alignment type:  
 Fixed V-Groove alignment type, Active V-groove alignment and Core-Alignment type. The Fixed V-Groove is typically used for ribbon fiber splicing. Active V-groove alignment and Core-Alignment type is used for single fiber splicing with more precise requirements, such as optical components manufacturing.

# S123 SERIES Hand-Held Fusion Splicer

With its low profile and IP-52 rated super rugged body, the FITEL S123 series fusion splicer offers speedy operation in every splicing field, FTTx, LAN, backbone or long-haul installations.

Large battery capacity makes it possible to perform 70 cycles for S123C and S123M4 with a single battery, and 160 cycles with two batteries.

Combining portability, power flexibility and field ruggedness, the S123 delivers fast and consistent splicing with outstanding mobility and extreme ease-of-use.

## KEY FEATURES:

- **IP-52 - Rugged and compact hand held design** for demanding environmental conditions
- **Fast splice (13 sec)** at low loss and **Fast Heating (25 sec)** for single fiber<sup>\*1</sup>
- **Simple operation** with Fixed V-groove
- **Splicer is compatible with the Seikoh Giken and Diamond Splice-on-connector (SOC)**<sup>\*2</sup>
- **70 cycles (Splicing & Heating)** with single battery<sup>\*3</sup>
- **Available for All METRO / LAN / FTTx fibers** including **ultra bend-insensitive fibers** (e.g. EZ-Bend™)
- **Easy maintenance** - Toolless electrode replacement/mirror free alignment system
- **Easy Software upgrade** via the Internet
- **Easily exchanged fiber holder systems** (tight holder / fiber holder / SOC holder)
- **PC interface software** to allow user manage splicing programs and results
- **Auto-start shrink sleeve oven feature**
- **Improved GUI** to further enhance ease-of-use
- **RoHS compliant**

\*1 By using semi-auto mode for splicing and pre-heating mode for heating.

\*2 S123M4/8/12 are compatible with Seikoh Giken 9 mm cleave length connector only.

\*3 By using semi-auto mode for splicing and regular mode for heating.

## UNDER TOUGH ENVIRONMENT:

S123 series passed criteria as below \*4;

### Drop Resistance

76 cm Drops from 5 different angles

### Water Resistance

IPX2 rating drip proof<sup>\*5</sup>

### Dust Resistance

IP5X rating dust proof<sup>\*6</sup>

\*4 Above tests were performed at Furukawa Electric Labs, and do not guarantee that the machine will be undamaged under these conditions.

\*5 IPX2 rating drip proof means that the machine can be exposed to 3 mm/min drip from 4 different angles with 15° tilt for 2.5 min each and still functions.

\*6 IP5X rating dust proof means that the machine can be exposed to dust particles with a diameter of 0.1 to 25 µm for 8 hours and still functions.

\*1 By using semi-auto mode for splicing and pre-heating mode for heating.

\*2 By using 2-batteries, semi-auto mode for splicing and regular mode for heating.

## Compatible with Splice-on-connector (SOC)

## FITEL Splicer SOC partners

## UNDER TOUGH ENVIRONMENT:

S178A passed criteria as below <sup>\*3</sup>;

### Drop Resistance

76 cm Drops from 5 different angles

### Water Resistance

IPX2 rating drip proof <sup>\*4</sup>

### Dust Resistance

IP5X rating dust proof <sup>\*5</sup>

\*3 Above tests were performed at Furukawa Electric Labs, and do not guarantee that the machine will be undamaged under these conditions.

\*4 IPX2 rating drip proof means that the machine can be exposed to 3 mm / min drip from 4 different angles with 15° tilt for 2.5 min each and still functions.

\*5 IP5X rating dust proof means that the machine can be exposed to dust particles with a diameter of 0.1 to 25 µm for 8 hours and still functions.

# S183PMII Fusion Splicer

The S183PMII Advanced Fusion Splicer was designed specifically for the demanding production and research applications of the optical components industry, being capable of:

- Splicing specialty and exotic fiber combinations
- Very large diameter fiber splicing (up to 500 µm)\*
- Polarization maintaining fiber splicing
- High-strength splicing application
- RoHS compliant

\* With optional LDF holder and LDF electrode.

## FEATURES & APPLICATIONS:

### Specialty Splicing Made Easy

The advanced features of the S183PMII allow you to splice today's and tomorrow's most exotic fiber types. Whether performing high-strength splices, splicing small cladding fibers (80 µm), large cladding fibers (500 µm), high Δ splicing combinations, PM fibers, or erbium doped fiber, the S183PMII is the splicer for your high-end application.

### Fast Splice Time

The splice time is lightning fast at 35 seconds for PANDA and 15 seconds for SM. The S183PMII Fusion Splicer is the fastest in the industry for most fiber applications, allowing you to increase efficiency on your production line.

### Safe PM Fiber Rotation

The new rotation mechanism on the S183PMII Fusion Splicer allows PM fiber to rotate while keeping it straight and stable. This minimizes fiber twist, which can be detrimental to sensitive splicing applications.

### Quick Loading & Automatic Machine Adjustment

The S183PMII Fusion Splicer automatically adjusts for different fiber coating and cladding sizes. There is no need to exchange v-grooves, or fiber clamps. In addition, the S183PMII Fusion Splicer has been designed so that the user simply loads the fiber and closes the lid to begin the fusion process. There is no need to lower or set fiber clamps before beginning your splice.

### Automatic Fiber Holder Release

The S183PMII Fusion Splicer automatically performs a tensile proof test on the fiber and releases the holder lid to avoid twisting the fiber after the splice. This automation eliminates the need for the user to manually open and reset the splicer after each fusion splice.

# S184PM-SLDF Fusion Splicer

Featuring 3SAE Technologies' "Ring of Fire", this 3 phase wide area plasma splicer makes it possible for flame polish, core diffusion, as well as large cladding fiber splicing. It is perfect solution for advanced OEM, R & D, Production and other special applications.

## FEATURES & APPLICATIONS:

### Three Electrodes

The S184PM-SLDF Fusion Splicer has three electrodes instead of the standard two electrodes. This groundbreaking technology makes the plasma field (temperature field) wider and adjustable.

### Applicable Fiber

Applicable from clad diameter 80  $\mu\text{m}$  up to 1200  $\mu\text{m}$ .

### Smooth Rotation Mechanism

The new rotation mechanism on the S184PM-SLDF Fusion Splicer allows PM fiber to rotate while keeping it straight and stable. This minimizes fiber twist, which can be detrimental to sensitive splicing applications.

### Automatic Adjustment for Fiber Size / Length

The S184PM-SLDF Fusion Splicer automatically adjusts for different fiber coating, cladding sizes and cleaves length. There is no need to exchange electrodes, V-grooves, or fiber clamps.

### Simple Operation

The S184PM-SLDF Fusion Splicer has been designed so that the user simply loads the fiber and closes the lid to begin the fusion process. The user can easily pick up the fibers after fusion splicing process.

### Intuitive Interface

The S184PM-SLDF Fusion Splicer features an intuitive GUI (graphical user interface) and transreflective LCD screen technology, the S184PM-SLDF operation is a snap! Function keys are simple and information displays are crisp and clear.

### Large Monitor

The S184PM-SLDF Fusion Splicer has a large high resolution color monitor. The location of the monitor can be easily switched either to the front or back of the splicer depending on user preference.

# Connector Termination System / Splice on Connector (SOC)

FITEL's connector termination system allows for unsurpassed performance and flexibility in the field.

Splice on connector (SOC) eliminates the need for field polishing and significantly improves the quality of the termination and installation time required.

FITEL's new S123C, S153A and S178A now can terminate connectors from both Seiko Giken and Diamond.

# Cleaver

## S325A Hand-Held High Precision Cleaver

### KEY FEATURES:

- One-Step Action
- Cleave Anywhere! - In Your Palm or on Your Desktop
- Easy Fiber Loading
- Simple Operation
- High Capacity Waste Fiber Collection
- Durable Design
- Easy Maintenance on-Site

### SPECIFICATIONS:

Fiber Types	All fiber types, single to 12-fiber ribbons
Clad Diameter	0.125 mm
Coating Diameter	0.25 mm and 0.9 mm for single fiber; 0.3 mm to 0.4 mm thickness for ribbons
Cleave Length	Single Fiber: Fixed Length - 10 & 16 mm Variable Length - 3 to 20 mm Ribbon Fiber: 10 mm Fixed Length
Dimensions / Weight	93 W × 68 D × 52 H mm, 330 g

\* S325S80 High precision cleave for 80 µm cleaving is also available.

## S310 and S315 Single Fiber Cleavers

The FITEL S310 and S315 Single Fiber Field Cleavers are designed for cleaving fiber in the field quickly and easily. The S310 and S315 Field Cleavers can accommodate 0.25 mm and 0.9 mm coating diameters and their small lightweight size makes them the perfect addition to any field splicing system. The S310 and S315 field cleavers require some skill to achieve the desired cleave angle and may not be appropriate for some splicing applications. The S310 is specifically designed to cleave fiber in the field accurately to a 16 mm length. The S315 has a graduated scale, which allows for cleave lengths of 5 to 20 mm.

### APPLICABLE OPTICAL FIBER:

Silica glass-based optical fibers, single fiber, 0.25 mm and 0.9 mm coating diameter, 0.125 clad diameter.

### MODELS:

S310 : For cleaving 16 mm length

S315 : For cleaving 2 to 20 mm length adjusting with scale

**Dimensions** 20 W × 125 D × 42 H mm

**Weight** 65 g

# S218R Thermal Stripper

When you need a cordless, light-weight, quick-strip solutions, the S218R optical fiber stripper efficiently solves your problems. This hot-stripping tool removes the coating of single fiber and ribbon fibers and runs on a built-in battery, providing cordless access around your workplace.

## S220A Optical Ribbon Fiber Separator

Designed to initiate separating 2 to 12-fiber ribbons into single fibers.

After shaving with S220A, the ribbon fiber can be easily separated by fingers into single fibers. Compact carrying case included as standard.

### APPLICABLE OPTICAL FIBER:

2 to 12 fiber ribbons with the thickness of 0.30 ~ 0.40 mm

**Dimensions** 55 W × 30 D × 42 H mm

**Weight** 100 g

#### Caution

Do not use the S220A on live fiber or for a mid-span strip. Discard the section of the fibers to which the S220A was applied before splicing or reconnecting the exposed fibers.

## S233 Optical Ribbon Fiber Splitter

FITEL S233 Ribbon Splitter splits 4, 8, 12, and 24-fiber ribbons more easily, quickly, and accurately than ever before. Another great Fitel fusion splicing accessory from Furukawa Electric.

### KEY FEATURES:

- Small, simple, and compact design for field use
- All-metal body for maximum durability
- Interchangeable fiber guides for different ribbon sizes
- No tools required to change fiber guides

### APPLICABLE OPTICAL FIBER:

0.125 mm cladding diameter; 4 / 8 / 12 / 24-fiber ribbons; 0.25 mm pitch; 0.30 to 0.40 mm thickness; UV-cured acrylic resin coating\*

\*S233 may not work satisfactorily with some ribbon fiber coating materials.

**Dimensions** 115 W × 20 D × 20 H mm

# ID-H / R Fiber Identifier

The FITEL ID-H / R is a rugged, user-friendly tool which identifies optical fibers by detecting the optical signals passing through the fiber utilizing local detection technology.

The feature and benefits are:

## FEATURES:

- Wide dynamic range
- No head changing or adjustments
- LCD screen adoption  
(Detection Light Level , Modulation Light Frequency , Machinery Information)
- Detects the signal without disrupting traffic
- Detects the tone signal and traffic signal
- Lighted LED displays for clear identification
- Lightweight design for easy handling
- Super low insertion loss
- RoHS Compliant

# LBT-101 Short Range Optical Tester

Measurement Tool for Live Fiber testing of FTTx. 1610 nm OTDR for short Distance testing with Built-in Optical Filter.

## LIVE FIBER TESTING

1610 nm light source and built-in optical filter realized the test of live fiber of PON system.

## KEY FEATURES:

### Live Fiber Testing<sup>\*1</sup>

Enabled live fiber testing by launching 1610 nm wavelength, (1310 nm / 1490 nm / 1550 nm).

### Portable

LBT-101 is a lightweight, handheld, user-friendly tool. Easily held in one hand.

### Easy Operation

Just pressing "START" button and it will start. Easy to operate for less experienced user.

### High Resolution

5 cm distance resolution. 2 m dead zone.

### Built-in Fiber

Measurable from the first connector.

### Real Time Sweeping

Real time sweeping to identify target fiber.

### Data Storage

Internal data storage is 40 MB (up to 800 traces). Also supported by external USB memory.

### Wide Screen

Full color 4.3" wide screen, which provides high visibility, both indoor and outdoor.

### Long Battery Life

Typically 3.5 hours by single charge.

### RoHS compliant

### New Upgrade Measurable Distance

Measurable distance expanded to **10 km** (conventional 2.5km)

\*1 : The confirmation that there is no influence on the actual communication system is necessary.

# CS201 Cable Sheath Strippers

The need for fast Mid-Span Access to the fiber cable core is very important for the rapid growing FTTx market. The CS201 is a tool which can perform mid span sheath stripping reliably, easily, and safely.

## FEATURES:

- Accurately removes the sheath of a cable without damaging the fiber
- Can be used for making circular and lateral cuts in the cable
- Blade is designed for safety
- Small and lightweight design

Circular cut in cable

Lateral cut along the cable

CS201

## SPECIFICATIONS:

Applicable cable diameter	ø10 ~ 32 mm
Applicable cable jacket type	Polyethylene Jacket, Laminated Aluminum Polyethylene Jacket. (Jacket Thickness : Less than 4 mm)
Dimensions	90 W x 38 D x 52 H mm
Weight	200 g
Change blade (Option)	Specify as CS202

## SHEATH REMOVING INSTRUCTIONS:

**STEP 1 :** Use PVC tape to mark the section of Jacket be removed

**STEP 2 :** Attach the CS201 to the cable.

**STEP 3 :** Cut the cable laterally between the marked position.

**STEP 4 :** Cut around the cable at the both ends (Circular)

**STEP 5 :** Strip the sheath off

**STEP 6 :** Pull the fiber out
